

Dear Family,

During the next few months, our class will be learning about electricity as part of our *Circuits and Pathways* science unit. We will be using batteries, wires and light bulbs to investigate circuits, switches, fuses, electrical resistance, and light.

We know that children do better in school when their families are actively involved in their learning. Here is one activity that you can do with your child at home to strengthen your child's understanding of how we use electricity every day.

Family Activity: Part 1: Help your child make an electrical map of one or more rooms in your home. Choose a room(s) that your child uses a lot, such as the kitchen. On the map, draw every object in that room that uses electricity. As you are making the map, ask your child how each object gets its electricity. Talk about how some things get their electricity from batteries and other things get their electricity from wall outlets. Make a key for the map that shows how each object gets its electricity. Ask your child where s/he thinks the electricity from the wall outlet comes from. You do not need to explain this to your child; s/he will be learning about it as part of our *Circuits and Pathways* unit.

Part 2: Once you have completed your map, use it as a tool to help your child realize how much electricity s/he uses in a day. Over the course of a day, have your child make a tally mark next to each object on the map whenever s/he uses it. At the end of the day, talk with your child about how much electricity s/he used that day. Did it seem like a lot or not very much? Could s/he use less electricity if s/he tried? You may also choose to show your child your electric bill and discuss how each time you turn something on you are spending money as well as electricity.

I am always eager to have family members come in and share their knowledge and experience related to our units of study. If you have a skill or experience related to electricity that you would be willing to share with us, please call or email me.

Attached to this letter is a sheet with many suggestions for supporting your child's science understandings at school, at home, and around the Seattle area. Please keep this sheet and take advantage of the suggestions as often as possible!

Thank you very much for all you do for your child.

Sincerely,

Family Strategies for Supporting Science

At School

- Talk to your child's science teacher about how your child is doing in class.
- Chaperone a science field trip.
- Volunteer to inventory a science kit for the teacher.
- Volunteer in your child's science class.

At Home

- Encourage your child to ask questions about the world as much as possible, and avoid giving answers. Encourage observation, exploration, investigation, or research instead.
- Ask your child thoughtful questions that promote the scientific skills of observing, comparing and logical thinking. Examples of question starters:
 - *What have you noticed about...?*
 - *How does it look/feel/smell...?*
 - *How are these the same or different...?*
 - *Which is longer/stronger/heavier?*
 - *How could you...?*
 - *What do you mean when you say...?*
 - *What makes you think so...?*
- Teach your child to provide evidence for her thinking by using the word "because" in her explanation (I think the fish is dead *because* it is floating upside down.).
- Encourage your child to draw detailed, colorful, labeled illustrations of things he is observing at home or school.
- Read non-fiction books together in your family's home language.
- Read the newspaper together: talk about a science-related article.
- Talk about the natural history of your country of heritage (e.g., Mt. Pinatubo in the Philippines, Mt. Fuji in Japan, tsunami in southeast Asia, Himalayas in India, Great Rift Valley in Eastern Africa).
- Cook together: talk about what you are doing as you are cooking.
- Work together in the garden: plant vegetables, start a family compost or a worm bin.
- Go through a kitchen cabinet: talk about which foods are good for you and which aren't; look at the ingredients and nutritional information on labels.
- Have your child help with small (and safe) repairs around the house.
- Find safe experiments to do together at home.
(www.exploratorium.edu/science_explorer/ has a great list)
- Listen to "Science Friday" on National Public Radio together.
(Fridays, 8-10pm on KUOW 94.9 FM)
- Choose appropriate science-related programs on TV to watch with your child:
 - Public Television (KCTS, Channel 9)
 - Discovery Channel
 - Animal Planet Channel
 - National Geographic Channel
 - Nature Channel
- Choose appropriate science-related websites to view with your child:
 - Bill Nye, The Science Guy (www.nyelabs.com)
 - How Stuff Works (www.howstuffworks.com)

Cool Science for Curious Kids	(www.hhmi.org/coolscience)
Extreme Science	(www.extremescience.net)
Cool Cosmos	(http://coolcosmos.ipac.caltech.edu)
Science News for Kids	(www.sciencenewsforkids.com)
Mt. St. Helen's Cam	(http://www.fs.fed.us/gpnf/volcanocams/msh/)

In the Seattle Area

- Go for a walk around your neighborhood: talk about how people have changed the natural environment in positive and negative ways; come up with ideas for how your family could make more positive changes in your neighborhood; talk about the landforms you see and how they were formed (e.g., Mt. Rainier).
- Go to the public library: find books about animals, insects, inventions, electricity, natural disasters, space.
- Go to the beach at low tide (e.g., Lincoln Park, Alki Beach, Carkeek Park).
- Take a trip to the...

Camps & Classes

- Find out about the Pacific Science Center camp every summer in Seattle. Scholarships are available. (206.443.2925)
www.cmiregistration.com/user/org/category.jsp?id=2367&org=135
- Coyote Central offers year-round classes for 5th-9th grade students that include science and technology-related activities such as cooking, building soapbox derby cars, welding, glass blowing, robotics, and lots more. Scholarships are available. (206.323.7276) www.coyotecentral.org/
