

SEATTLE PUBLIC SCHOOLS INDIVIDUAL SCHOOL SUMMARIES

The following section presents summary statistical information for each school in the district.

Two kinds of data are presented:

- Student and staff demographic data as well as student assignment data. These data reflect the October 1, 2007 student and staff population, and;
- School year 2006-2007 student outcome data. These data are based on students enrolled in the 2006-2007 school year.

Data are presented in five separate tables for high schools, middle schools, elementary schools, K-8 schools and alternative schools. Various data sources were used and a number of assumptions were made to compile these data. Readers should review these notes carefully before making interpretations or drawing conclusions. The following data elements are arranged alphabetically.

Attendance

Average daily attendance for each school year is calculated for each student by dividing the number of days a student actually attends a school by the number of membership days (the total number of possible school days a student is enrolled in a particular school during the year). This data is then averaged for all students enrolled in the school at any time during the school year 2006-2007.

Average Enrollment

A school's average enrollment for the 2006-2007 school year is calculated from the monthly head count enrollment figures for each school from September 2006 to June 2007.

Assignment Information

First choice figures show the number of students enrolled on October 1, 2007 for which the school is their first choice. Only entering grades to the schools (kindergarten, grade 6, or grade 9) are reflected in this analysis. Students were included only if they went through the on-time batch process in the Spring of 2007. Students with a continuing assignment to a school (returning to the same school) are not included in the counts for first choice. APP and Spectrum students are not shown in this analysis. Percentages are based upon the total number of students in the entering grade level.

Elementary area resident figures show the number of students from that school that live in the school's reference area, or for middle schools, the number of students from the middle school who live in the middle school choice region. Comparable data for high schools are not shown since high school students can choose from any high school in the city. Percentages are based upon the total number of students enrolled as of October 1, 2007.

Cumulative GPA (Grade Point Average)

The average cumulative GPA counts students at secondary schools (grades 6-12) who were enrolled at a school at the end of the 2006-2007 school year. Courses that are graded pass-fail are not included in the calculation. The cumulative GPA is based on all courses taken at all schools in grades 6-8 for middle schools or 9-12 for high schools. If a student changes schools often, which sometimes happens in some alternative schools, the cumulative GPA may more reflect work at previous schools rather than the current school.

Dropouts

All Classes: Annual Dropouts

Annual dropout statistics are reported only for secondary students (grades 6-12). A student was counted as a dropout from *the last confirmed school of record* if he or she left school other than for academic completion or as a confirmed transfer to another school district at any time during the 12 months after October 1, 2006 and was not enrolled in the Seattle Public Schools on October 1, 2007. Students who complete 8th grade are not counted as dropouts from the middle school they last attended. [NOTE: In prior publications of this booklet, students who completed 8th grade but who did not attend high school as 9th graders, and who were not confirmed transfers, were counted as dropouts from the last middle school attended. However, for purpose of computing a Districtwide middle school annual dropout rate such “no shows” at high school are counted as middle school dropouts from the District (see pages 127 to 137).] Percentages are based upon both the 2006-2007 average and total grades 6-12 enrollment for a school. Note that the dropout rate reported here is based on a slightly different calculation methodology than that used for the overall District Annual Dropout rate in the previous section. The reason for the difference is that the annual dropout rate calculated in the Student Educational Status section historically has always been the ratio of dropouts in a given year divided by that year’s October 1 enrollment count. However, when the data are disaggregated by school, using only the October 1 enrollment count for the basis tends to exaggerate the dropout rate for some schools where students who dropped out from a school were not present at that school on October 1, 2006 (which, for example, happens frequently at some alternative programs). The use of the average and total enrollment numbers to compute dropout rates give a more accurate picture of the actual enrollment at a school during the year, taking into account the migrations in and out of a school during the year. The annual dropout rates based on both average and total enrollment provide alternative perspectives of a school’s population and the school’s ability to keep students in school.

Dropout data reported to the Office of the Superintendent of Public Instruction (OSPI) (reported below) differs slightly in that it measures dropouts during a dissimilar time frame from the first day of school to the day before the next school year, generally three to four weeks before October 1. The OSPI method, while preferable longitudinally, does not allow for the resolution of the status of late arriving students who return to some of our alternative programs after the official start of the school year. Thus the procedures used in the OSPI approach are not easily adapted to determine annual dropout rates. The District method counts as a dropout those students who leave for employment, marriage, armed forces, were suspended or expelled without returning, do not show up at their assigned school or who are listed as “unable to locate”. Students who transfer to another school or who earn a GED are not counted as dropouts. Students are counted only once even if they may have dropped out several times during the year. Comparisons with dropout rates from other districts should be undertaken with extreme caution.

Dropouts

Cumulative Cohort Dropouts from High Schools

Each school year, the Office of the Superintendent of Public Instruction (OSPI) requires the District to report the educational status of all high school students. A cumulative cohort method is used to define a group of students who, beginning as ninth graders in October 2003¹, were expected to graduate in June of 2007. (Also see the previous section on Student Educational Status for more information.) Dropouts for the Class of 2007 are defined

as all students who are not graduates, are not a confirmed transfer to another school or district, and who are not currently enrolled as of the start of the 2007-2008 school year. Percentages are based on an adjusted number in class that subtracts confirmed transfers to other schools from the total number of students who entered the class. Please note that the total number of dropouts (and graduates, below) listed here may differ slightly from other publications because recently closed schools and summer school-only students in the class of 2007 are not included in the individual summaries.

¹ - but also includes incoming 10th graders in 2004, 11th graders in 2005, and 12th graders in 2006.

Enrollment, Ethnic Distribution and Gender on October 1

The enrollment count and ethnic distribution/gender percentage reflects all students in grades K-12 as of October 1, 2007 reported to the State for the purpose of basic education revenue apportionment. Head Start and preschool students are not counted. Part-time students and half-day kindergarten students are counted the same as other students.

Expulsions and Suspensions

Disciplinary actions reported here include short-term or long-term suspensions and expulsions. Records for suspensions (long-term and short-term combined) and expulsions were extracted from a central disciplinary action database. Records were aggregated by student so that, no matter how many times a student was suspended or expelled, or for how many reasons, the student is counted only once in each applicable category. For the same reasons discussed above for dropouts, percentages were calculated by dividing the number of students subject to a disciplinary action by the both the average and total enrollment for a school in 2006-2007.

Free or Reduced-Price Lunch

Students are eligible for free or reduced-price lunches on the basis of low family income. The specific income requirements depend upon the size of the family and are adjusted each year. In 2007, a family of four would be eligible for free lunches if they had an annual income below \$26,845. The income limit for reduced-price lunches for a family of four was \$38,203. The free or reduced-price lunch percentage reported here is based on students enrolled on October 1, 2007, and does not reflect students who arrive or leave after that date.

Graduates

All Classes

On-Time Graduates are students who had been assigned a year of graduation of 2007 and who graduated from the school during the 2006-2007 school year. Percentages are based on the average number of students enrolled in the class of 2007 during school year 2006-2007. *Total Graduates* indicates the total number of students graduating from a school during the 2006-2007 school year regardless of their assigned year of graduation, and also includes any students graduating before or after their expected year of graduation and students graduating with an unresolved or missing year of graduation code.

Graduates

Class of 2007: Cumulative Cohort Graduates

Similar to the methodology explained above in *Dropouts: Cumulative Cohort Dropouts*, graduates for the Class of 2007 are defined as all students who are not dropouts, are not a confirmed transfer to another school or district, and who are not currently enrolled as of the start of the 2007-2008 school year. Percentages are based on an adjusted number in class that subtracts confirmed transfers to other schools from the total number of students who entered the class. Note that the number of graduates listed here may differ from the number reported in *On-Time Graduates*, above, because this count includes students in the class of 2007 who may have graduated before the 2006-2007 school year.

Limited English Proficiency (LEP)

Each student's primary and home languages are obtained at registration at our Enrollment Services Center. If a parent indicates that the student is less fluent in English than their primary language, the student is given the Language Assessment Scales (LAS) test to determine English fluency. The result of this assessment determines whether the student is classified as eligible for Bilingual services. In addition to LAS scores, a separate code indicating that the student is of Limited English Proficiency (LEP) is maintained by the Transitional Bilingual Education Office. A student's continuing eligibility for bilingual services is reassessed annually using scores from the Washington Language and Proficiency Test (WLPT II). The data presented here reflects those students eligible for bilingual services as of October 1, 2007.

Not Living with Both Parents

These figures show the number and percentage of students not living with both parents using data obtained from students or parents during registration. All living situations other than "Living with both parents" are combined. Students without valid information for living situation are considered "not living with both parents" in these charts.

Percentage of Returning Students

The percentage of returning students, also known as a continuation rate, is calculated as the percentage of students enrolled on October 1, 2007 who were also enrolled at the same school on October 1, 2006. An adjustment is made for students expected to rise to the next academic level (grades 5, 8 and 12) in October 1, 2006, and are excluded from the analysis.

Special Education

The number of students classified by the Special Education department as eligible for Special Education services on October 1, 2007. This number includes all handicapping conditions and service levels as defined by the Special Education department and the State Office of the Superintendent of Public Instruction (OSPI).

Staff Data

Data are supplied from the Human Resources central database as of October 1, 2007. Data are reported as head counts of all full-time and part-time positions at each school. Only positions that were filled as of October 2007 are included. Vacancies temporarily filled by substitutes are not counted. Some school staff positions that are funded by central administration office budgets are also not included.

Total Enrollment

A school's total enrollment is the unduplicated count of all students who have attended the school during the 2006-2007 school year. Students who move from one school to another are counted once in each school they attend throughout the school year.

Transfers In/Out

Transfers In/Out is defined as the number of students who either entered or left a particular school between October 1, 2006 and June 21, 2007 (the day before school ends), for reasons other than graduation. Building staff report student entry and withdrawal information to centrally maintained computer databases from which these statistics were derived.

Scholastic Aptitude Test (SAT)

The Scholastic Aptitude Test (SAT) is a college entrance exam administered independently by the Educational Testing Service (ETS) that is taken by many juniors and seniors. Approximately 50% of the college-bound seniors in Seattle schools take the SAT. The major portions of this test measure student abilities in writing and in verbal and mathematical concepts. Data show the 2007 verbal, math and writing average scores by school and the District average. No breakdowns are available by regular or alternative school groupings.

Washington Assessment of Student Learning (WASL)

Following a law passed by the State Legislature in 1993, the Office of the Superintendent of Public Instruction (OSPI) implemented a new assessment for all fourth and seventh graders in Spring 1997, tenth graders in Spring 1999, fifth and eighth graders in Science in 2004 and 2003, respectively, and third, fifth, sixth and eighth graders Mathematics and Reading in 2006. The Washington Assessment of Student Learning (WASL) requires students to apply their knowledge by writing descriptive essays, comparing information from different texts, using math skills to solve complex problems, and explaining the steps they took to arrive at an answer. Scores are based on a clear and challenging set of academic standards, or *essential academic learning requirements* (EALRs), that describe what students should know and be able to do in core subjects by their assigned grades. Students completed tasks in two main content areas in Mathematics and Reading in grades 3, 6 and 8; three main content areas of Mathematics, Reading and Writing in grades 4, 7 and 10; and also in Science in the 5th, 8th and 10th grade. Their responses were then evaluated and scored by trained experts. The overall scores in the content areas are then used to determine if the student met standard. A "standard" is the level of performance which demonstrates a student has achieved the knowledge and skills described in the EALRs. "Meeting the standard" in a subject area means a student has shown proficiency over the test content, including factual knowledge, application of that knowledge, and reasoning skills appropriate for their grade. In this section we report the percent of students meeting standards in the four content areas in Spring of 2007. If a student was not tested and not formally "exempted" from the test, the student was considered to have not met standards. As OSPI does on the State web site where each school's WASL performance is summarized, we do not show percent meeting standard where the number of students tested at a school is 10 or fewer.
