

Math Enrollment

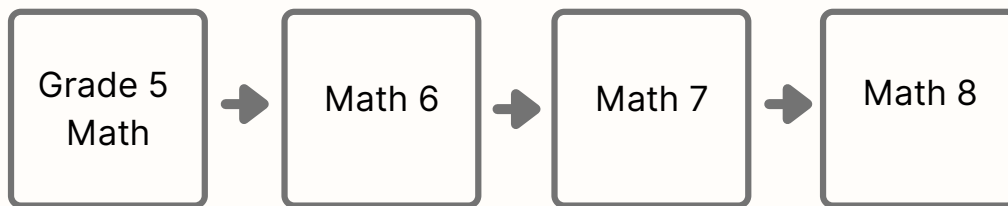

5th Grade to 6th Grade Transition

Seattle Public Schools | 2022-2023

Guidance

Students in Seattle Public Schools enroll in their next course in sequence. Thus, students transitioning from Grade 5 Math to 6th grade will be enrolled into Math 6.

Sequence of Math Courses

SPS strives to "ensure continuity of children's learning across early childhood, elementary, middle, and high school mathematics by creating a coherent mathematics pathway with standards, curriculum, and assessments focused on deep mathematical understanding."

Catalyzing Change in Early Childhood and Elementary Mathematics, pg. 126

Secondary Math Career Options

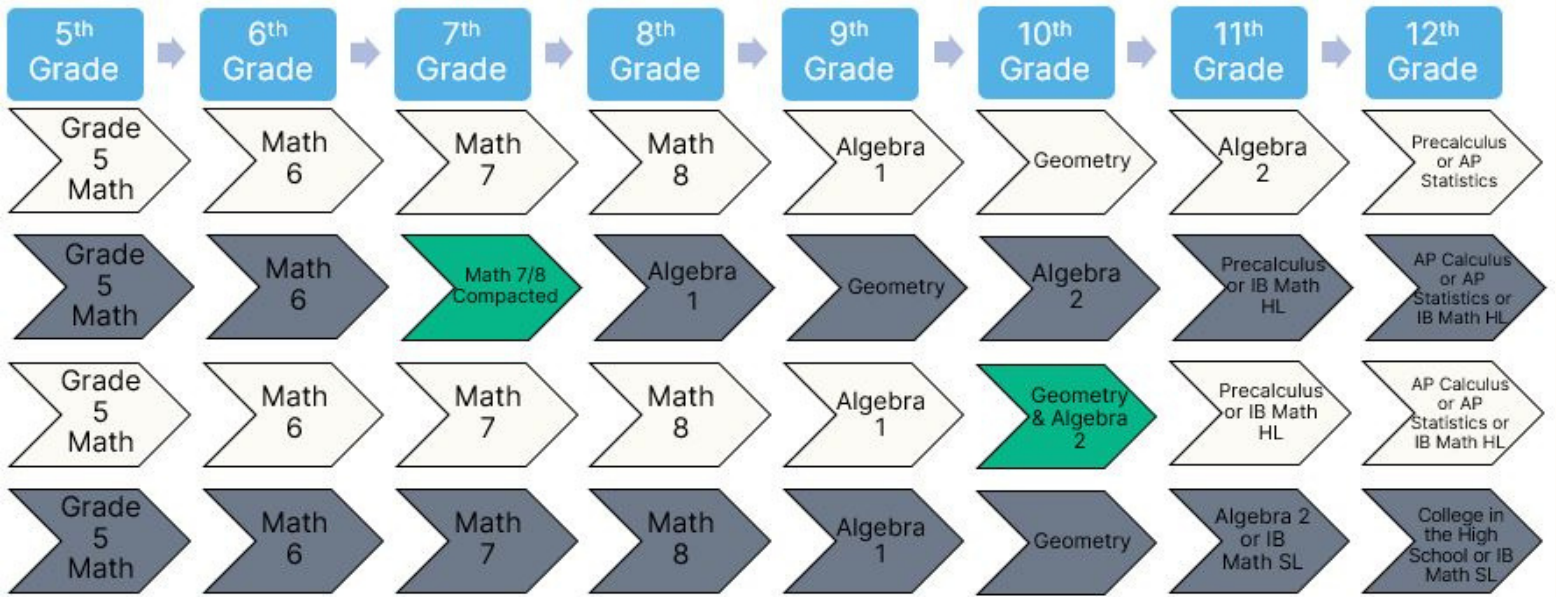

All students can access advanced math coursework (Advanced Placement Statistics, International Baccalaureate Standard Level math (IB SL), or College in the High School math courses) by their senior year. Students will also have the opportunity to accelerate one year in math in middle or high school to reach additional advanced math coursework (Advanced Placement Calculus or International Baccalaureate Higher Level math (IB HL)) IF it aligns with their high school and beyond goals.

Secondary Math Career Options

Any of the progressions will ensure students are college and career ready in mathematics

Example Math Progressions and Acceleration Possibilities

This is not an exhaustive list | Acceleration and course options vary by school
